About the Corridor

The East 14th Street/Mission Boulevard corridor is served by Line 99 and links five BART stations, the ACE/Amtrak Centerville station, and shopping areas. It serves local trips and provides "last-mile" connectivity to the regional rail systems. The Alameda Countywide Transit Plan projects that the Warm Springs BART station area will become a strong transit market by 2040.

**BY 2020: ENHANCED BUS**

Bus service could be improved using Enhanced Bus components, including better traffic signals, sidewalk extensions, and priority treatments for transit. Proposed signal changes by the cities of Fremont and Hayward would increase bus reliability and decrease bus delays. Bus service may be extended south when development expands around the Warm Springs BART station.

**BY 2040: BUS RAPID TRANSIT**

The anticipated travel demand along this corridor calls for a robust transit investment, such as Bus Rapid Transit (BRT). Bus-only lanes would separate buses from other autos, reducing transit delays and improving transit reliability. A substantial investment, such as BRT, will be designed to improve pedestrian and bicycle access. BRT service will use low-emission vehicles and provide frequent transit service.

actransit.org/PlanACT
AC Transit wants to hear from you on the preliminary alternatives for each corridor by October 30, 2015. Your feedback will be used to refine and finalize the alternatives in early 2016.

Through the Major Corridors Study, AC Transit will identify which of four levels of transit service – Enhanced Bus, Rapid Bus, Bus Rapid Transit (BRT), or rail – would best serve the transit needs of the East Bay communities along each major corridor.

ACCESSIBILITY
Upon request, the information on this fact sheet is available in accessible formats: plain text (e-mail, CD-ROM), large print, Braille, or audio tape. Call (510) 891-4700.
