The proposed Line 97 South Alameda County Major Corridors Project is 13 miles long and extends from the Bay Fair BART station to the Union City BART station. Line 97 is one of the 11 high ridership routes in the AC Transit service area, thus the project represents a critical investment in the communities served by AC Transit. The Project will enhance transit operations and help reduce fuel consumption and emissions through traffic signal operation improvements and bus stop optimizations.

The improvements will include the installation of a Transit Signal Priority (TSP) system at all signalized intersections along the route to reduce bus wait time at red traffic lights. The Intelligent Signal System will be deployed in San Leandro, Hayward and unincorporated Alameda County. This system will help ease congestion by adjusting signal timing to accommodate changing traffic conditions in real time. Please note that bus stop relocations and longer bus stops may impact parking along the route. The remaining project elements and improvements are displayed on the Project Map. Project design is expected to be finalized in Fall 2017, followed by implementation and completion in Spring 2018.
Line 97 Improvement Project
South Alameda County Major Corridors:
Union City

Certain stops not affected by the Line 97 Improvement Project are not displayed.

Funding Partners

Project Partners
Metropolitan Transportation Commission • California Department of Transportation
County of Alameda • City of Union City • City of Hayward • City of San Leandro
